

TSR Blade

Blades that will save you hours of downtime

TSR Standard

2-piece blade

The TSR blades (Top Screen Rapid) represent a significant upgrade over the traditional TS blades (Top Screen) for our screening buckets. While TS blades are effective for various screening tasks, replacing them due to wear requires time-consuming work and specialized lifting equipment.

Opening the chain box and removing the drums to install new blades on the shafts can be demanding. The TSR blades streamline maintenance with their innovative 2-piece structure, allowing for individual blade replacement directly on the shaft without the need to disassemble the drum or open the chain box.

TSR reduces downtime for maintenance, enhancing productivity on job sites. Changing the blades on one drum with TSR blades takes almost 2 hours less compared to the standard blades.

TSR and TS blades can be used on the same bucket. You can have TSR blades just on the upper drum which is exposed to more wear than other drums, and standard TS on the lower ones.

TSR Axe

2-piece blade

Save 2 hours on blade changes with TSR Blades. Watch the timelapse video!

Watch the tutorial on how to change the blades, and know what tools you need.

ALLU TSR blades are ALLU genuine spare parts and are not sold as a standard configuration on ALLU screening buckets. Contact ALLU Support to learn more!
